COLLECTION: Hyde Exploring Expedition at the American Museum of Natural History

CDI ACCESSION NUMBER: 000157

ERRATA:

COMMENTS: Bound notepad entitled: "1896 Rooms #32 and 33 also measurements of Rooms Pueblo Bonito." Notebook is 37 pages long—each page double sided. It contains both excavation notes and detailed drawings of room contents, dimensions, and burials.

CITATION: Pepper, George 1896 Pepper, George, Hyde Expedition, Pueblo Bonito, 2/Folder 3. In Hyde Exploring Expedition, Box 02, Division of Anthropology, American Museum of Natural History, New York, NY.
The first evidences of a body were the ribs which were found 1' 6" north of the Southern wall (where the door was) and 1' west of the corner. The ribs were united by small fragments of wood and so tough and so soft that it was almost impossible to follow out the implement and remove them without fracture.
The jeweled bowl #193 was found below the mass of bones and about 4" above the base level - the mass of bones ranging from 6' to 1-3'.

The Potsherd #193 was in an upright position and was 6" above the base level.

Bowl #194 was on a level with the bottom of #193.

Bowl #195 was about 6" above the floor level and was in a horizontal position bone down. Rusted on the large flat stone.

The mass of burnt cloth was found in the mouth of the Western door, part of its residue against the South side.

Potsherd #196 was lying on its side and the mouth was just below the large flat stone.
The large flat stone in front of the Western door was 11" below the lintel jolts of the Western door. The dirt below this stone was hard and calcified from being saturated with water.

TheTooth and broken malleus were found 6" from the fragments of jolting worked 6. 11" below the level of the large flat stone.

The Phalange H was found at the same depth as S and almost against S.

The malleus worked I was on the same level as H.
Fan cover #192 was on the same level as the large flat stone.
Fan cover #195 was 6" below the large flat stone.
The red and yellow paint were found a little below the Western door level and were in layer C.
The jet ornamental was on the same level as the Western doorway.
Fan cover #201 was on a level with the large flat stone.
Broken Panel #202 was resting against the west front of the Northern doorway about 6" below the level.
The stone balls #30 24504 were 1' below the level of the Northern Doorway.
Layer A is sand 3" thick.

B = Soil channeled at 5" thick.

C = Sand 1½" thick.

D = Black Soil 1" thick.

E = Sand 3½" thick.

F = Soil which arises below the door level. These measurements were taken about a foot West of the Southern door and 3" North of the S wall. The inflow has been from the East, hence the sand layers increase in thickness as the Eastern foot of the room is nearer.
The back bore and Jelvie's mine intact and were lying N., W. by S. E. The Jelvie being toward the former joint the Jelvie was 6" above the level of the western doorway, and the ventilator was almost on the horizontal plane. Ten ventilators were intact and in position, so were also the powder and true Jelvie boxes, the other mule (3) fell when the mine
Pitcher #205 was resting on its side with it bow a triple hip line than the rest of the bow was on a level with the west end door.

For #206 was resting on its side and on the same level as #205.

Pitcher #207 was lying on its side with its mouth against the Goodtime side of the room it was 1" above level than #206.

For corner #205 was 3" lower than #206.

For corner #209 was 3" under Pitcher #205.

For corner #216 was 4" below #207.
Skeleton #1 was lying on its back the head resting upon the spine. The lower jaw was lying propped against the south wall but the body rested on a north eastly direction from X. From the center beam to the truss was the upper jaw. The highest part of the skull was 4' 6" the balance of the body was three four inches deeper. The lower jaw was two inches below the head and was at right angles to it so the teeth were facing the south.

Jaw 4' 2" was found 3' 6" from
Westinc Wall 6" from S. wall and 4' 8" from ceiling beams. Skull # 2 was 3' 8" from the ceiling beams. It was lying N. E. X. S. W. and rested upon the seat. The lower jaw was about 1" to the east of the head and on the same level. On the left side of the head there were indications of a piece of the mortuary cloth. The body ran toward the N. E. corner.
The bone were scattered about from the corner of wood that had formed into the room or were the case with most of the skeleton — only the vertebrae remained in place.
Shell No. 3 was 3'-10" from the roof, blocking the left side of the receptory. The left joint of the head was lying on its side. Will the tithe toward the south coast just back of and on a level with the tithe. The wood was covered with balsam and all around the head and the head of the was transparent bread. Part of the head was covered with cloth. FC.

The Conveyed Bowl A (Red Ware) was 4' below the ceiling beam. The Bowl B was 4' 5" below the beam. The head of Shell No. 4 was lying with the lower jaw against the Eastern Wall front the Right.
sec. The body was on the ceiling brick was 4' 6" with the head over a piece of galvax.
Pitcher C was 5' below the ceiling beams and was lying on the side. Pitcher D was standing upright and the mouth was 4' 9" from the beams of the ceiling.
R's mode of death, C, was 5' below the ceiling beams and rested against the eastern wall. The head of Sketchon 45 was 4' 3" from the ceiling beams. The body was lying upon the body with the head resting upon on the left side the body was in place and had suffocated very little from
The water there was a large jar

7 at the eastern side of the head.

It rested against the wall of the brick

below that was a bowl until

watered in another 4 behind

and to the south of the large

jar was a jutting I-circle

still remained over the face

and three things around the

opening of the right side

jar was 4’ 4” from the ceiling beam

at the highest joint it would stick

over a tiffin higher than the other

joint although it was lying on it

and

Bowl G was 4’ 9” from the beam.

Bowl H was tipped up and its
highest joint was also 4' 9" from beam.
Pitcher T was 4' 4" from the ceiling beam. It was lying on its side in a slanting position, the mouth being the highest joint.
Jaw X was lying with the condyle upright from the left condyle to the ceiling beam, 4' 10". The jaw from T was on the same level as the jaw X.
The Pitcher K was lying on its side and was 5' from the ceiling beam. The Bowl L was in an upright position, the distance from the ceiling to the rim being 5' 1".
Pitcher N was in a slanting position.
the mouth being offcenter from this point to the ceiling beams was 4'-1".

Jaw #2 was standing upright, the distance from the ceiling beams to the condyle being 4'.

Jaw #5 was lying in the natural joint and almost rested against the foot in the room; it was 5' from the ceiling beams.

Head #6 rested against the south wall and was lying on its side with the face inclined slightly backward and was the case with most of the skulls. The cervical vertebrae were in place; it was 4'-8" from the upper wall to the ceiling beams.
Bowl N was sitting upright from the rear to the keel line beam to beam was 5'.
Bowl O was in an upright position and from rear to beam was 5' - 2'.
The Pitkin P. was inclined southwest toward the North. The rear was 5' from the edge beam just beyond 28' and acting against it handle was the Pitkin R. resting between P & R.

The red bowl R gently curved the mouth of the Pitkin R. and acted directly on the rear then being no drift between. To the North of the Pitkin R. and acting against it was the Pitkin S. West of the Pitkin P. was the Bowl T.
ed toward the West but the Eastern side was against T. To the North of T and resting upon it in such a way that the south had made it was the bowl U. South of the bowl T and with its mouth against this bowl was the little pitcher V. The bowl Q was in an upright position and was 4' 10" from the ceiling beams. The pitcher R was 4' 11" from the beams and was in an upright position. The pitcher S was upright and was 5' 6" from beams. The bowl T was standing Westward at the highest and they 3' 2" from beams. The bowl U was also standing
Toward the West and was 5' 3" from the ceiling beams.
The small Pitcher X was lying on the side and was 5' 4" from
the ceiling beams.
Pitcher W was resting on the Western
side of the Bowl T and was in a
slanting position the bore toward the
N. West at was 5' 4" from the beam.
The large wooden instrument X
was 4' 1" below the beam.
Bowl X was somewhat slanted toward the
West but was resting on the bottom at
was 5' 3" from the beam -
X was the bowl Y.
The Bowl Z was about half way
north to the S. W. of X and was 5' 4"
from the ceiling beams inside #1, was the bowl #1.
Shell #7 was lying on the fanlight from the fanlight beam. It was on the floor in the S.W. corner, the light was the highest point and from here to the ceiling beam was 4'-7". The lower jaw was not with the cranial.
Shell #8 was resting upon the fanlight and occultar boxes. The upper jaw was toward the S.E. and from the lower joints of the occultar to the ceiling beams was 4'-6". The lower was not with the shell.
The jaw worked = was in an upright position and was 3'-5" below the ceiling beams.
